ROOT CLASSES - MATHEMATICS

Class 10th NCERT Study Material & Formulas

Chapter 11: Areas Related to Circles

Key Concepts & Important Formulas:

* Perimeter and Area of Circle: Circumference = 2*pi*r, Area = pi*r^2.
* Area of Sector of Angle theta: Area = (theta / 360) * pi * r^2.
* Length of Arc of Sector: Length = (theta / 360) * 2 * pi * r.
* Area of Segment of Circle = Area of corresponding Sector - Area of corresponding Triangle.

Solved Exam Examples & Practice:

Example: Find area of sector of circle with radius 6 cm if angle of sector is 60 degrees.
Area = (60/360) * (22/7) * 6 * 6 = (1/6) * (22/7) * 36 = 132/7 = 18.86 cm^2.
